Returns within the fixed income (bond) category varied depending on duration and credit quality. Shorter duration and high credit quality bonds performed much better

than long duration and low credit quality. The average duration of the fixed income in client portfolios has been reduced further during the last month.

Latin America has been the only geographic region with positive YTD equity returns.

As for equity style, growth stocks have declined 22% or more YTD, regardless of market capitalization. Growth stocks had higher returns during the last five years, but many of the growth stocks had valuations which were hard to justify. In contrast, value stocks have negative returns in the low single digits on a YTD basis.

The industry sectors with the largest weighting in the S&P 500 are technology, health care, and financials. The only two sectors with positive returns YTD are energy and

utilities with returns of 60.6% and 5.0%, respectively. However, their sector weights in the S&P 500 Index are small at 4.8% and 3.0%, respectively.

Fortunately, our portfolio equity positions have been overweighted with value style stocks and the energy sector.

Precious metals performed well until mid-April. Given higher levels of inflation, geopolitical risk, and physical demand for precious metals, one would expect them to perform better. The Sprott gold and silver bullion trusts have YTD returns of 1.4% and -6.4%, respectively.
